

Pacer

Battery Cable Assemblies

Battery Cable Assemblies are short runs of battery cable with both ends terminated that are used to connect one or more batteries to an electrical system. They can be terminated with a variety of ends and boots to handle just about any job. High-quality battery cable assemblies are a must in any electrical system in a harsh environment. When a battery cable assembly is built with longevity in mind it is built to handle the harshest environmental conditions.

Construction

High quality tinned or bare copper with proprietary insulation. Highly conductive terminals and heat shrink

Benefits

Excellent Flexibility

Highly Durable

Built for Routability

Designed for Marine Usage

Simple to Install

Saves Time and Money

Pacer is a Proud Member of:

Resistances

Acid Resistant

Alkali Resistant

Oil Resistant

Moisture Resistant

Flame Resistant

Gasoline Resistant

Abrasion Resistant

- Installs in minutes and lasts for years
- Easily route through tight spaces without compromising either the conductors or the insulation
- Saves time and money by getting you what you need without having to stock the inventory or built it yourself
- Custom made lengths and configurations to get you the exact part you need

Pacer manufactures battery cable assemblies in the most common gauges ranging from four gauge (4AWG) to four aught (4/0AWG). Even after over 40 years in the industry, we continually look for ways to improve our processes and enhance our products. This has led us to manufacture the highest quality battery cable assemblies available. Easily connect batteries to your electrical system with battery cable assemblies built for flexibility, durability, and longevity.
