Lighting Fixtures

Fixtures is a broad category of LED lighting equipment that includes the front fixture to an assembly or the back body of an assembly. That is to say, these are the pieces that make up the assemblies that we sell. The fact is that often times people don't need to replace an entire assembly. You may just need to replace a single piece of it. To replace the entire assembly would be problematic, time-consuming, and costly. This is why we went above and beyond to make sure that our LED assemblies can be separated into pieces.

Marine Tough

All Pacer Group LED lights are built with the harsh marine environment in mind

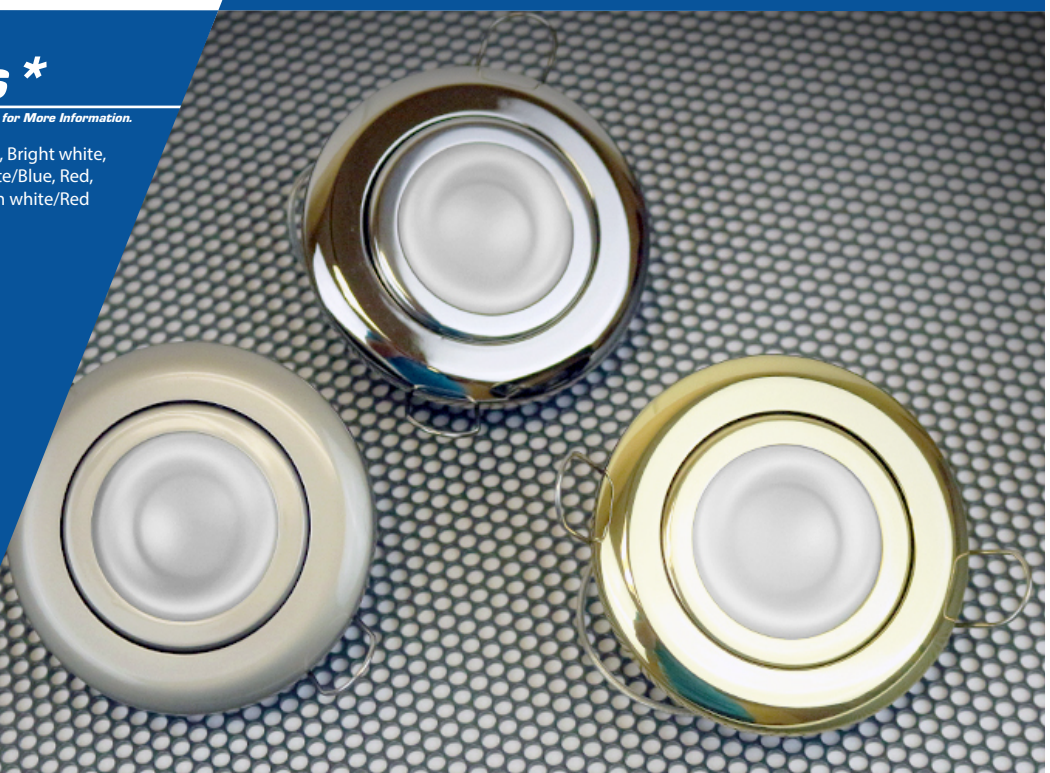

Available Finishes

- **PS** Polished Stainless
- **PC** Polished Chrome
- **BS** Brushed Stainless
- **WH** Powder Coat White
- **NS** Nickel Satin
