

# Winterizing Your Boats Electrical System

Protect your boat's electrical system from the harsh winter months by following some simple guidelines. This checklist is aimed specifically at winterizing the electrical system and does not cover fuel, the motor, or any other aspects. Please use this checklist in tandem with a generalized winterizing list.

**Test your electrical parts**

**Verify terminals and connectors**

**Take care of batteries**

**Inspect bus bars**

**Inspect battery cables**

**Clean and cover your boat**

**Look at your marine wiring**

**PRO TIP:** While you are winterizing your boat, take note of the tools you are using. If you need them now, you will need them in a crisis. So keep those same tools on your boat at all times.
